## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 08 August 2005 has been entered.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Soneda et al. (5,856,918).

With respect to claims 1-5 and 8-12, Soneda et al. disclose, in Fig. 2, a circuit comprising: “a driving node (K1)”; “a boosting voltage”; “boosting capacitors (C1-C3)”; “switches (PT1-PT3)”; “a control signal (CLK3)”; “a boosting level control signal (CLK1)” and “an external supply voltage detector (NU1, NU2, or NU3)”, all connected and operating similarly as recited by Applicant.

With respect to claims 6-7, clearly the above circuit to Soneda et al. will provide the recited method.

Examiner has fully considered Applicant's remarks for the above rejection and has not found them to be persuasive. Applicant's remarks are unclear because there is no SW1 or SW2

seen in Soneda et al. As seen from Fig. 5, CLK1 is not responsive to CLK2 and vice-versa. Thus, the signals "operate independent of each other". Examiner notes that operating independent is not the same as being generated independent.
